Product Data Sheet

Attapulgite natural Granules

Chemical Composition: - It is hydrated aluminium magnesium silicate.

Formula :- (Mg Al)5 Si8 O22 (OH)4

Grade: - Attapulgite Natural Granules 1 to 5 mm

Grade Description: -

Attapulgite granules are porous, absorbent pellets made from a processed magnesium aluminium silicate clay, characterized by their high liquid absorption, low dust, and non-swelling nature.

The granules have a unique rod-like crystal structure that gives them excellent absorbent properties, making them ideal for uses like cat litter, industrial absorbents, and carriers for pesticides and fertilizers.
